Project Scope: EduTrack Student Management System

System Description

The **EduTrack Student Management System** is a centralized database solution used to store and manage academic records. It helps schools track students, subjects, and grades easily and efficiently. By saving all information in one secure database, it eliminates manual paperwork and ensures data is always accurate and easy to find.

Key Functionalities

- **Add, Edit, Delete Student Info:** Manage personal details like names, birthdays, and contact information.
- **Enroll Students in Subjects:** Link students to specific courses and instructors.
- **Record Grades:** Input and update academic marks for every subject.
- **View Student Details:** Instantly access a student's full academic history.
- **Search Student Records:** Quickly find students using filters like ID number or name.

Stakeholders

- **Students:** The primary subjects whose records and grades are tracked.
- **Teachers:** Users who input grades and monitor student performance in their subjects.
- **Registrar:** The office in charge of managing official student enrollment and permanent records.
- **School Admin:** Oversees the entire system, managing user access and overall school data

Core Data Processes

- **Input Student Data:** Collecting and entering new student details into the system.
- **Save to Database:** Securely storing information in organized tables (Normalization).
- **Update Records:** Modifying existing data when a student moves to a new level or changes subjects.
- **Retrieve/Search Info:** Pulling specific data from the database for viewing or editing.
- **Generate Reports:** Creating summaries of grades, class lists, or enrollment statistics.
